

# Demo Customer Support FAQ

IMPORTANT DEMO NOTICE: This document contains fictional sample data only. It is created for local testing, portfolio demonstrations, and RAG chatbot evaluation. It does not contain real personal data, real customer data, real financial data, legal advice, credentials, secrets, or confidential business information. It is safe to upload into the demo environment.

## Purpose

This fictional FAQ is designed for testing a Business RAG chatbot in a safe local or portfolio environment. It contains realistic support policies, order handling rules, escalation guidance, and fallback behavior. It does not describe any real company policy or real customer obligation.

## Quick reference

| Topic                  | Demo answer                                                            |
|------------------------|------------------------------------------------------------------------|
| Standard support hours | Monday-Friday, 09:00-17:30 CET                                         |
| First response target  | One business day for standard support cases                            |
| Delivery window        | 3-5 business days for standard demo orders                             |
| Refund review window   | 10 business days after eligible request                                |
| Escalation trigger     | Unresolved after two business days, billing issue, or critical blocker |

## 1. Account and onboarding

How do new demo customers get access?

A demo account is created after the fictional onboarding checklist is completed. The customer receives an invitation link, a temporary demo workspace name, and setup instructions. No real credentials should be shared in the demo environment.

Who helps with onboarding questions?

Customer Success handles onboarding questions about workspace setup, supported documents, and initial usage. Technical Support handles login errors, API sync issues, and integration troubleshooting.

Can customers upload real company files?

No. This demo FAQ says customers should upload fictional, anonymized, or approved sample files only. Confidential, personal, legal, financial, health, credential, or production data should not be uploaded.

## 2. Orders and delivery

What is the standard delivery timeline?

Standard fictional demo orders are marked for delivery within 3-5 business days after confirmation. This timeline is not a real shipping promise.

What happens if an order is delayed?

If a demo order is delayed by more than two business days, Support should check the order status, review warehouse notes, and escalate to Operations if the delay is not explained.

Can a customer cancel an order after shipment?

A demo order cannot be cancelled after the fictional shipment status changes to shipped. Support may offer a return review if the item is eligible under the demo return rules.

## 3. Returns, refunds, and damaged items

What should a customer do if an item arrives damaged?

The customer should report the issue within five business days, provide the demo order number, and describe the damage. Support should create a damaged-item case and route it to Operations.

How long does refund review take?

Eligible demo refund requests are reviewed within 10 business days. The FAQ does not promise automatic approval.

Are all products refundable?

No. Products marked final sale, custom configuration, or demo-only sample are not automatically refundable. Support should check the product status before giving an answer.

## **4. Technical support**

What information should be included in a technical support request?

The request should include the demo workspace name, a short problem description, the affected feature, the approximate time of the issue, and any non-sensitive error message.

When should a technical case be escalated?

Escalate technical cases when the customer cannot log in, data sync fails repeatedly, API responses are unavailable, or the same blocker affects multiple users.

Should customers send passwords or API keys to Support?

No. Customers should never send passwords, API keys, private tokens, or production credentials through support tickets, email, chat, or demo tools.

## **5. Billing and invoice support**

Who handles invoice questions?

Finance handles demo invoice questions, including payment status, disputed charges, credit note requests, and missing billing references.

What should Support collect for a billing question?

Support should collect the fictional invoice number, order reference, issue type, and customer account name. Support should not ask for real bank details or card numbers.

Can Support promise a discount?

No. Support cannot promise discounts, refunds, legal terms, or custom pricing unless the relevant department has approved the answer.

## **6. Fallback and uncertainty rules**

When the answer is not in the documents, the chatbot should say the answer was not found in the uploaded demo documents and should avoid guessing.

When related documents are incomplete, the chatbot should answer only the supported part and clearly say what information is missing.

When a user asks for real private data, the chatbot should not provide private or sensitive information. This FAQ contains no real private data, credentials, bank details, or confidential records.

## **End of demo FAQ**

This document is intentionally fictional and safe for testing. Any resemblance to real people, customers, invoices, orders, companies, addresses, or policies is accidental.
